

# The Supergrid 2D

# The Supergrid 2D

breaking down the boundaries

# The Supergrid 2D

breaking down the boundaries  
between electricity, power, transport

# The Supergrid 2D

breaking down the boundaries  
between electricity, power, transport  
**98% of power failures start in the grid**

# The Supergrid 2D

breaking down the boundaries  
between electricity, power, transport  
**98% of power failures start in the grid**  
**reduce vulnerability**

# The Supergrid 2D

breaking down the boundaries  
between electricity, power, transport  
**98% of power failures start in the grid**  
**reduce vulnerability**  
hardware and software is there

# The Supergrid 2D

breaking down the boundaries  
between electricity, power, transport  
**98% of power failures start in the grid**  
**reduce vulnerability**  
hardware and software is there  
but human capacity must improve

# The Supergrid 2D

breaking down the boundaries  
between electricity, power, transport  
**98% of power failures start in the grid**  
**reduce vulnerability**  
hardware and software is there  
but human capacity must improve  
**6 hours of sun in the desert**

# The Supergrid 2D

breaking down the boundaries  
between electricity, power, transport  
**98% of power failures start in the grid**  
**reduce vulnerability**

hardware and software is there  
but human capacity must improve  
**6 hours of sun in the desert**  
**could supply 90% of the people**

# The Supergrid 2D

breaking down the boundaries  
between electricity, power, transport  
**98% of power failures start in the grid**  
**reduce vulnerability**

hardware and software is there  
but human capacity must improve  
**6 hours of sun in the desert**  
**could supply 90% of the people**  
**within 3,000 km range**

# The Supergrid 2D

breaking down the boundaries  
between electricity, power, transport  
**98% of power failures start in the grid**  
**reduce vulnerability**

hybrid grid

hardware and software is there  
but human capacity must improve  
**6 hours of sun in the desert**  
**could supply 90% of the people**  
**within 3,000 km range**

# The Supergrid 2D

breaking down the boundaries  
between electricity, power, transport  
98% of power failures start in the grid  
reduce vulnerability

hardware and software is there  
but human capacity must improve  
6 hours of sun in the desert  
could supply 90% of the people  
within 3,000 km range

hybrid grid  
distributed power, micro-grid and  
national and super-grid

# The Supergrid 2D

breaking down the boundaries  
between electricity, power, transport  
98% of power failures start in the grid  
reduce vulnerability

hardware and software is there  
but human capacity must improve

6 hours of sun in the desert  
could supply 90% of the people  
within 3,000 km range

hybrid grid  
distributed power, micro-grid and  
national and super-grid  
solution is a combination of  
alternatives

# The Supergrid 2D

breaking down the boundaries  
between electricity, power, transport  
**98% of power failures start in the grid**  
**reduce vulnerability**  
hardware and software is there  
but human capacity must improve  
**6 hours of sun in the desert**  
**could supply 90% of the people**  
**within 3,000 km range**

**hybrid grid**  
**distributed power, micro-grid and**  
**national and super-grid**  
solution is a combination of  
alternatives  
**local second best with shorter lines**  
**offers better resilience**

# The Supergrid 2D

breaking down the boundaries  
between electricity, power, transport  
**98% of power failures start in the grid**  
**reduce vulnerability**  
hardware and software is there
